

**COLLEGE OF COMPUTER STUDIES
SOFTWARE TECHNOLOGY DEPARTMENT
DEFENSE EVALUATION SHEET**

THS-ST1/ Thesis Title:	Proponents: <i>Note: The group's leader should affix his/her signature after the verdict & revisions are stated.</i>
Socius: A Chatbot focused on training Pragmatic Competence assessed through Grice's Maxims and Implicatures	DIMACULANGAN, Aldwin JAVIER, Devon GUERRERO, Miguel REGALADO, Luke

Adviser	Defense Venue	Defense Date/Time
Ethel Ong	Zoom	July 21, 2025 8:00 - 9:30

Panel Members	Signature -- Date/Time
Ethel Ong (Lead)	
Edward Tighe	
Jackylyn Beredo	

Recommendations:

Accept with revisions to be checked by

Technical aspect is accepted; and research poses minimal to no risk or concerns will be resolved in the revisions.

☐ Lead panel

☒ All panel

☐ Adviser

☐ **Re-defense**

Technical aspect has concerns; or research poses more than minimal risk.

☐ **Re-demo**

Major software revisions need to be performed.

☐ **Fail**

Research does not satisfy the requirements as expected.

Technical revisions (use additional page if necessary)

1. Abstract

- a. Remove mention of neurodivergent, make the “*reading between the lines*” an important part of everyday conversation
- b. Review the following sentence for grammar: "The system is built with Python and the Gemini API, trained on the GRICE dataset and augmented with synthetic examples"

2. Chapter 1

- a. Remove the last sentence (objective) in 1.1
- b. Consider merging the 1st and 2nd research objectives (reflective feedback is part of the APAM framework to be indicated in the Scope and Limitations), and move 2nd research objective (give reflective feedback) as a software objective
- c. Scope and Limitations
 - The participants need not be neurodivergent, and justify (see comment in Abstract).
 - Indicate that the 4 maxims are not dependent on paralinguistic cues.
 - How will the GRICE dataset be tweaked to be applicable to the local context and target users? Will few-shot prompting cause unnecessary delays during an actual user session?
 - Have a brief discussion on the limitations that might come about due to the target participants and the culture/biases that come from the dataset. Is it possible that Filipino participants might not fully understand some examples presented?
- d. Methodology
 - 1.5.1 How will the constructed scenario database be validated?
 - 1.5.3 should be *Validation* that involves inviting young adults to use the chatbot
 - 1.5.4 would be *Data Analysis*. Explain how the data collected in 1.5.3 will be analyzed. Include log analysis.
 - 1.5.5 *Documentation and Report Writing*.
 - Include expert evaluation (1.5.3) to evaluate the conversation log given some metrics. Indicate the required background to qualify as an expert for your research.

3. Chapter 2

- a. Include existing studies on the 3 in-house chatbots - Sociusbot, Amy and Kulturo.
- b. In Table 2.5, is it correct that there is a study called "Dataset limitations"? Is this just a formatting issue? Please review and confirm.

4. Chapter 4 - fix the content

- a. Convert 4.3 *Scope and Limitations* to paragraph format.
- b. Expand the description of each component of the Archi Design in 4.4 *Architectural Design*.
- c. Update “*Load GPT-4 Model*” to using Gemini as presented.
- d. Dedicate a full section, 4.5, to discuss the *Conversation Flow*. Include the diagram from the slides.
- e. Move *Calendar of Activities* to 1.5 *Research Methodology*
- f. Missing: 4.6 *Resources* – describe 3rd party tools and resources, e.g., Gemini and GRICE dataset
- g. Can Figure 4.1 either be bigger or have a larger font? The figure presented in the defense slides is better.

- h. The Gantt Chart of Activities should include more fine-grain tasks. Please review and fix.
- i. For the pragmatic theories you will use to explain to the user would be the 4 maxim - quantity, quality, relation and manner, will there be a fixed text to explain these or will the explanation be adapted to the specific scenario or user's context, i.e., based on user utterance?
- j. Clarify which model of Gemini is being considered. Also, discuss any limitations that might come about by using online-based LLMs. This could be in the Scope and Limitations section.
- k. Add clarification as to how the GRICE dataset will be used (1) by you (for the scenario) and (2) by the LLM (for understanding). How will training/prompting be done?

5. Chapter 5

- a. The algorithms should be labelled as "Listing" and not "Figures". *Table of Contents* should include a List of Listings.
- b. Include the knowledge base structure and examples found in the slides.

6. Mechanics

- a. Title page: change "thesis proposal" to "partial document".
